# **BUSINESS REQUIREMENT**

# **UBER TRIP ANALYSIS**

# **DAHBOARD 1: OVERVIEW ANALYSIS**

Analyse Uber trip data using Power BI to gain insights into booking trends, revenue, and trip efficiency, helping stakeholders make data-driven decisions.

#### KPI's

- 1. **Total Bookings** How many trips were booked over a given period?
- 2. **Total Booking Value** What is the total revenue generated from all bookings?
- 3. **Average Booking Value** What is the average revenue per booking?
- 4. **Total Trip Distance** What is the total distance covered by all trips?
- 5. **Average Trip Distance** How far are customers traveling on average per trip?
- 6. **Average Trip Time** What is the average duration of trips?

# **Expected Outcomes:**

- ✓ Identify trends in ride bookings and revenue generation.
- ✓ Analyse trip efficiency in terms of distance and duration.
- ✓ Compare booking values and trip patterns across different time periods.
- ✓ Provide insights to optimize pricing models and improve customer satisfaction.

#### **CHART's**

Create a Measure Selector using a Disconnected Table with the following values:

- Total Bookings
- Total Booking Value
- Total Trip Distance

Then, use a measure to dynamically update the visualizations based on user selection.

By Payment Type (Card, Cash, Wallet, etc.)

By Trip Type (Day/Night)

#### **Additional Enhancements:**

- **Dynamic Title** Update the chart title based on the selected measure.
- > Slicers Add filters for Date, City, and other interactive filters for deeper analysis.
- ➤ Tooltips Show additional details like Average Booking Value or Trip Distance.

#### Vehicle Type Analysis - Grid View in Power BI

Create a grid table (matrix or table visual) to analyse key performance indicators like Total Bookings, Total Booking Value, Avg Booking Value, Total Trip Distance across different Vehicle Types in Uber trips.

#### **Power BI Implementation:**

- ➤ Use a Table or Matrix Visual to display Vehicle Type with the KPIs.
- **Apply Conditional Formatting** to highlight high and low values.
- **Enable Sorting & Filtering** for user interaction.

### **Total Bookings by Day**

- Detecting trends and fluctuations in daily trip volumes.
- Identifying peak and off-peak booking days.
- Understanding the impact of external factors (holidays, events, weather) on ride demand.
- Supporting strategic planning for resource allocation and pricing adjustments.

# **Location Analysis**

Understanding trip locations is crucial for optimizing ride distribution, demand forecasting, and operational efficiency. This analysis focuses on:

# **➤ Most Frequent Pickup Point**

- Identify the most common starting locations for trips.
- Helps in optimizing driver availability and dynamic pricing strategies.

# > Most Frequent Drop-off Point

- Find the most common drop-off locations.
- Requires activating an inactive relationship in Power BI between Pickup Location and Drop-off Location in the data model.

### **▶** Farthest Trip

- Determine the longest trip based on distance travelled.
- Useful for analysing outlier trips, long-distance demand, and fare optimization.

# **Total Bookings by Location (Top 5)**

- Identify the **top 5 locations** with the highest trip bookings.
- Helps in demand forecasting and optimizing driver availability in high-traffic areas.

# **Most Preferred Vehicle for Location Pickup**

- Determine the most frequently booked **vehicle type** at each pickup location.
- Supports strategic vehicle distribution based on customer preferences and location demand.

# Other Implementation Enhancements for Uber Trip Analysis Dashboard

#### **Bookmark for Data Details**

- Add a "Data Details" bookmark to display a pop-up or side panel explaining:
  - o Meaning of key metrics (Total Bookings, Total Trip Distance, etc.).
  - o Description of tables used in the analysis.
  - o Data source and refresh frequency.

#### **Clear Slicer Button**

- Add a "Clear Filters" button using a blank button with a Reset Slicers action to reset all selections in one click.
- Improves user experience for quick dashboard resets.

#### > Download Raw Data Button

- Add a button to export raw data in CSV or Excel format.
- Use Power Automate or built-in Power BI Export functionality.
- Enables users to analyse raw data outside Power BI if needed.

# **DAHBOARD 2: TIME ANALYSIS**

To understand trip patterns based on time, Uber needs to analyse ride demand and trends across different time intervals. This dashboard will help in optimizing operations, pricing, and driver availability.

### **Global Dynamic Measure (Filters All Charts)**

A measure selector will be created for:

- **✓** Total Bookings
- **✓** Total Booking Value
- **✓** Total Trip Distance

This dynamic measure will update all visuals based on user selection.

#### **Visualizations:**

#### By Pickup Time (10-Minute Intervals) - Area Chart

- Groups trip bookings into **10-minute intervals** throughout the day.
- Helps in identifying peak and off-peak demand periods.

# By Day Name - Line Chart

- Shows booking trends across Monday to Sunday.
- Useful for analysing weekday vs. weekend demand.

# By Hour and Time - Heatmap (Matrix Grid)

- **Rows:** Hours of the Day (0–23)
- Columns: Days of the Week (Mon-Sun)
- Values: Selected Dynamic Measure (e.g., Total Bookings)
- Highlights peak booking hours across different days.

# **DAHBOARD 3: DETAILS TAB**

To provide in-depth insights and allow users to explore granular data, a **Grid Tab** will be created. This tab will enable drill-through functionality, allowing users to access detailed records based on selections made in other dashboards.

### **Features of the Grid Tab:**

# > Grid Table with Key Fields:

• Displays essential trip details

# > Drill-Through Functionality:

- Users can right-click on a data point from other visuals (e.g., charts, heatmaps) and drill through to this Grid Tab.
- Displays detailed records related to the selected data point.

#### **Bookmark for Full Data View:**

- A "View Full Data" bookmark to toggle between filtered drill-through data and the complete dataset.
- Allows users to reset filters and see all records easily.
